

STONEPLATFORM

WHOLESALE CARRIER PLATFORM

*Face no limits.
We grow with your
business*

Improve your productivity at any time without investment and pay only for what you really need. If you are expecting a fast paced growth in your activity, Stonework Solutions guarantees optimal performance and scalability. Forget about maintenance fees and technical staff, this modular basis solution is constantly being updated with innovative new functionalities.

IMMEDIATE SCALABILITY

Forget about infrastructures, maintenance or evolution, and focus on your core business.

Have at your disposal the latest technology and the necessary capacity to manage and control both your current and future volume of calls, without having to invest based on expected growth.

- Make your business grow and forget about technical issues. StonePlatform guarantees the optimal performance of your business activity.
- Do not invest in equipment that you are not sure of using in the short term and forget about maintenance fees and continuous updates.
- StonePlatform helps your business grow, allowing you to start the service without any initial investment and just assuming monthly fees.
- Take advantage of a unique platform with high performance without having to face expensive costs regarding technical staff and maintenance.

REAL-TIME TRAFFIC REPORTS

Not Near but Real time traffic analysis

Anytime anywhere, StonePlatform focuses on growing your business and facilitates the necessary infrastructure. Is also responsible for providing you detailed real-time information from any connected device in order to make you take the correct decision.

- Once a call has finished, the system will process it and will offer to the User a real-time analysis and representation of KPIs of the processed traffic according to destinations involved, Provider of the route, duration of the call, and release cause among others.
- CDRs are being sent constantly, and are immediately available for analysis and download in formats easily manageable by the User. These reports will offer both technical and commercial traffic analysis as well as quality parameters.
- StonePlatform manages a high volume of information in real-time in an extremely short response time.
- The User has a global view of the business situation but can also get fine-grained information from CDRs through group, drill down and filter operations in a fast and fully configurable reporting interface. He will also have access to notifications and messages in order to provide the User with useful information or suggest him to implement a new strategy.

CARRIER MANAGEMENT

Turning large information volumes into real value for your business

Users will always have the latest technology available and the optimal capacity to manage both their current and future business volume without having to worry about investments according to expected growth.

- Easy creation of Clients/Providers in the system and start doing business straight away. The User will be able to group them based on quality parameters or invoicing structure and each group can have multiple interconnections assigned.
- Price lists from Providers are easily uploaded in the system, offers can be generated and sent to Clients, and all the updated information can be accessed easily from any connected device.
- Working with a variety of Clients/Providers makes it complicated to efficiently control the process of updating information. Thanks to our real-time notifications, the User will be able to detect these conflicts and react in time.
- Centralized control of all Clients and Providers registered in the system. The User may activate or deactivate their activity based on the defined business strategies.

STONENWORK SOLUTIONS is a young and dynamic company with a recognized position in the Telco market. From Madrid we develop management tools specially designed for International Service Providers real-time needs that require minimum reaction time. Our suite of solutions is continuously being updated and improved and is accessible from any connected device, including tablets and mobile phones. These solutions are built on a modular basis and these modules are efficiently interconnected in order to face all business challenges.

Our current solutions in the company portfolio are the following:

- **STONEPORTAL** Wholesale Carrier Portal
- **STONEPREMIUM** IPRN Carrier Platform
- **STONEFRAUD** Fraud Control Carrier Platform
- **STONEPLATFORM** Wholesale Carrier Platform

REAL-TIME ROUTING MANAGEMENT

StonePlatform works for you

No matter how many price lists you manage for both Providers and Clients, StonePlatform will guide your routing based on your business strategies and will offer the necessary tools for online modifications.

- Real-time operation. Immediate routing changes among different strategies: Least Cost Routing, Ordination, Percentage, or combinations.
- Immediate notifications for unexpected interconnection tariff changes. These notifications can be configured as simple alerts or as suggestions for optimal routing based on cost and quality needs in real-time: "Time is money".
- Real-Time routing is a cost aware system that will assure your revenue by keeping the margins on the levels you define.
- Several route tables can be defined according to the preferred routing strategy, and offers can be generated and sent to Clients directly by the User or through an automatic process.

BILLING & RISK

Take a step forward. Avoid surprises in your financial situation

Optional and fully integrated module that provides the User all the necessary information about his current financial situation anytime, will apply automatic control actions and will permit him to be aware of future events.

- Invoices are generated automatically and the User just has to approve them before they are automatically sent to Clients. Not only can Users validate or disagree with the content of an invoice, but they can also edit the information shown before sending it out.
- The User can export invoices into an external accounting system and can also carry out a netting process between Providers and Clients invoices.
- This module provides real-time information about the risk position of the company taking into account both Clients and Providers side. Alerts and notifications are generated in order to inform the User or to apply specific actions to avoid risky situations.
- The User has access anytime to both his current and future financial situation according to the traffic that is being processed at that moment (Cash Flow and Tax Position)

We currently process billions of events daily, and this number is growing fast. All these events are translated into real-time useful information for our Customers. Our core value is to be able to detect and act on time, and this is the reason why we stand out from the rest.

Believe in our professional experience. We believe in your business optimization and will grow along with you.
